

# RK200-CA GPS

## Self Installation Guide

### Unit information:

- The unit has two internal antennas, one for GPS, and the other for cellular.
- The unit can be installed in the dash, or on the windshield (inside vehicle) in a position that will not be obstructed by the wipers.
- The unit comes with a separate power cable.

### About the power cable:

The cable has three wires, **RED**, **WHITE** and **BLACK**:

- **RED**: This wire is the 12-24V connection, a 3A fuse is included within the cable.
- **WHITE**: This wire is for ignition, it too has a 3A fuse is included within the cable.
- **BLACK**: This wire is ground, it does not have a fuse.

### Notes

- The unit must be installed in a dry area, it must also have a good view of the sky for optimal GPS positioning.
- Do not mix voltage levels, it must all be 12V OR 24V.
- The unit has two status lights, a **GREEN** and a **RED**. The **GREEN** is **GPS**, and **RED** is **cellular**. When all is in good function, and the motor is ON, both lights should be lit solid.
